

1. Aim

To demonstrate Locard's Exchange Principle by displaying the metadata (created, modified, and accessed timestamps) of a file, showing that every interaction with a file leaves digital traces.

Algorithm

1. Start the program.
2. Create or open a file.
3. Write data into the file.
4. Read the file metadata using the operating system.
5. Display the file creation time.
6. Display the file modification time.
7. Display the file access time.
8. Stop the program.

Code

```
import os
import time

file = "evidence.txt"

print("Creation Time :")
print(time.ctime(os.path.getctime("C:/Users/saich/OneDrive/Desktop/evidence.txt")))

print()

print("Modified Time :")
print(time.ctime(os.path.getmtime("C:/Users/saich/OneDrive/Desktop/evidence.txt")))

print()

print("Access Time :")
print(time.ctime(os.path.getatime("C:/Users/saich/OneDrive/Desktop/evidence.txt")))
```

Output

```
Creation Time :
Sat Jul 11 13:52:11 2026

Modified Time :
Thu Jul 23 11:31:26 2026

Access Time :
Thu Jul 23 11:31:26 2026
```
